

**Integrated Capacitor-Like Battery
and Associated Method**

5

Abstract of the Disclosure

A method and system for fabricating solid-state energy-storage and energy-
conversion devices including fabrication of films for devices without an anneal step,
especially for the fabrication of supercapacitors and photovoltaic cells. A film is
10 fabricated by depositing a first material layer to a location. Energy is supplied
directly to the material forming the film. The energy can be in the form of
energized ions of a second material. Supplying energy directly to the material
and/or the film being deposited assists the growth of the crystalline structure of the
film and controls stoichiometry.
